## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **LISTING OF CLAIMS:**

- 1. (Currently amended) [[A]] An isolated N-glycosylation-modified recombinant chicken cystatin, characterized in that Asn<sub>106</sub>-IIe<sub>108</sub> in its amino acid sequence is modified to Asn<sub>106</sub>-Thr<sub>108</sub> and wherein the isolated N-glycosylated recombinant chicken cystatin has an improved stability in a freezing-thawing process and in a heating process.
- 2. (Canceled)
- 3. (Original) The N-glycosylation-modified recombinant chicken cystatin of claim 1, which functions in the inhibition of thermal degradation and gel softening of surimi.
- 4. (Original) The N-glycosylation-modified recombinant chicken cystatin of claim 1, wherein said surimi is derived from nemipterid, mackerel or cod.
- 5. (Withdrawn) A nucleic acid molecule encoding the N-glycosylation-modified recombinant chicken cystatin of claim 1, characterized in that the triplet codon encoding the 108<sup>th</sup> amino acid in the amino acid sequence of chicken cystatin is changed from AGT to TCA or its degenerate codons.
- 6. (Withdrawn) An expression vector comprising the nucleic acid molecule of claim 5.
- 7. (Withdrawn) The expression vector of claim 6, which is the expression vector pGAPZαC containing GAP promoter.
- 8. (Withdrawn) A yeast transformant harboring the expression vector of claim 6 or 7.

- 9. (Withdrawn) The yeast transformant of claim 8, wherein the yeast is Pichia pastoris.
- 10. (Withdrawn) The yeast transformant of claim 9, wherein the yeast is *Pichia pastoris* strain X-33.
- 11. (Withdrawn) A method for producing the N-glycosylation-modified recombinant chicken cystatin of claim 1, characterized in comprising the steps of culturing a nutritional medium under an aerobic condition with the yeast transformant of claim 8 for producing the N-glycosylation-modified recombinant chicken cystatin, and recovering the N-glycosylation-modified recombinant chicken cystatin thus obtained.
- 12. (Withdrawn) The method of claim 11, wherein said recovery is conducted by salting-out precipitation, concentration, centrifugation, filtration, ultra-filtration, filtration chromatography, gel chromatography, affinity chromatography, ionic chromatography, or a combination thereof.
- 13. (Original) A composition for inhibiting the thermal degradation of surimi, comprising the N-glycosylation-modified recombinant chicken cystatin of claim 1 and an expander selected from the group consisting of a compatible protein, starch or a combination thereof.
- 14. (Withdrawn) A method of using the composition of claim 13 for inhibiting the thermal degradation of surimi, comprising adding the composition of claim 13 to surimi.
- 15. (Withdrawn) The method of claim 14, wherein the surimi is derived from nemipterid, mackerel or cod.
- 16. (Withdrawn) The method of claim 14 or 15, wherein 0.01 to 0.10 active units, preferably 0.02 to 0.05 active units, of the N-glycosylation-modified recombinant chicken cystatin of claim 1 per 1 g of surimi is added.
